

COMPLEX BLUE

COMPLEX BLUE is a unique state of the art cleaning formulation that attacks greases and oils unlike any other cleaner. It doesn't matter if the soil is petroleum, plant or animal base; **COMPLEX BLUE** will attack it. This unique surfactant system also effectively cleans particulates in the form of dust, dirt, grime, carbon and graphite. It has numerous cleaning applications with commercial, industrial and residential soils. **COMPLEX BLUE** can be used to clean shop equipment, floors, carbon buildup from two cycle engines, carbon smoke from fires; even brake dust is easily cleaned.

The normal application of this product is at room temperature but it can also be used hot (up to 170° F). It can be used in pressure washers, dip tanks, solvent tanks, vibratory finishers, and specialized spray washers where high pressure is not used. It may also be used by hand with a shop cloth or spray bottle.

COMPLEX BLUE is safe for use on all metal surfaces but can also be used on fabric, vinyl, tile, marble, and granite and concrete. It is not corrosive, however, the strong cleaning system in the product will dry out skin, so rubber gloves should be worn.
